

Erratum MARSIM

The sign of the longitudinal position in Figure 8 has been plotted incorrectly. Therefore Figure 8 and the corresponding text should be rectified as follows:

“... When the midship section of the SS model is located in front of the midship section of the STBL a yaw moment is induced on the SS directed with her bow **away from** the STBL. When the midship of the STBL is in front of the SS model the yaw moment on the SS is directed with her bow **towards the** STBL...”

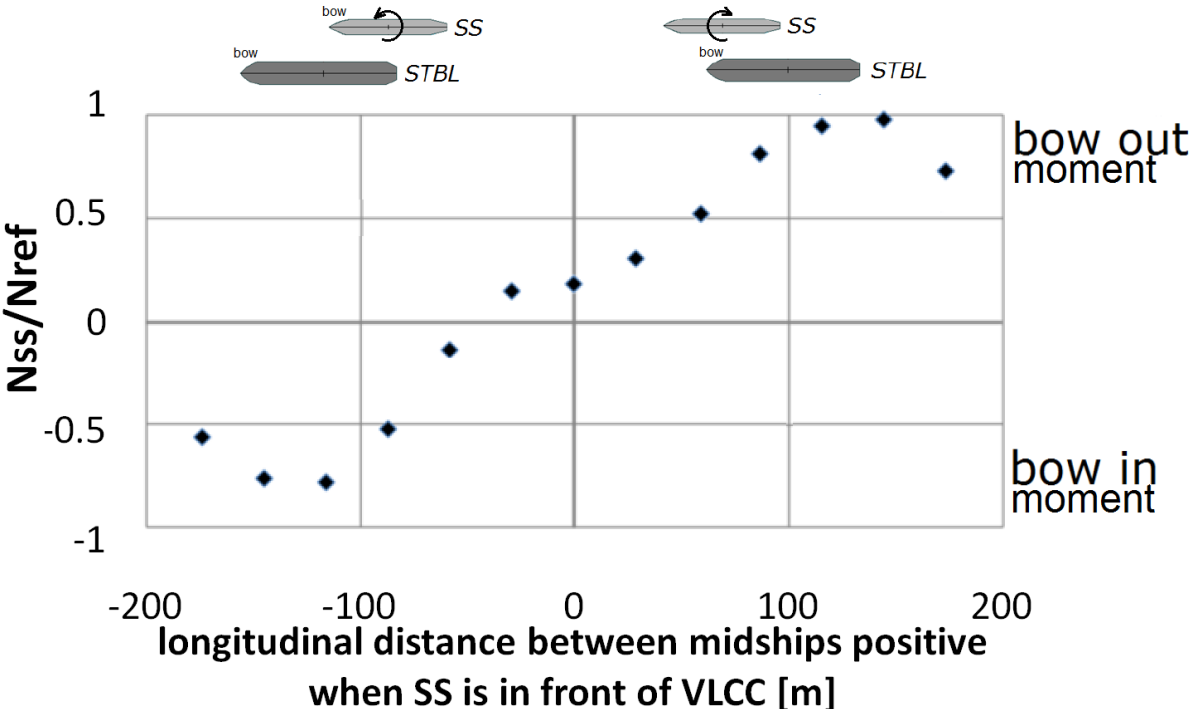

Figure 1 Yaw moment of SS at one lateral distance and different longitudinal distances to the STBL
